

CEO

- *Commercializing advanced R&D investments*

Ohmatex's core competence is the integration of microelectronics in clothing and textiles. The company works with leading international companies developing new products and solutions for smart textile and wearable technologies.

After a recent expansion of shareholders, we wish to appoint a commercially orientated CEO who can develop a successful entrepreneurial business into a commercially growing international company in its market niche.

Job description

You will lead a team engaged in research, product development and business development. As CEO you will be responsible for the strategic and operational management of the company's activities in space, medical, sport and textiles.

One of your key tasks will be negotiating with commercial decision makers, both partners and customers, in larger international organizations to ensure that relevant contracts are established.

Your role will consist primarily of:

- Identifying and planning a realistic commercialization strategy in collaboration with the Board.
- Exploiting the skills and network which Ohmatex has developed through an ongoing dialogue with the employees and owners.
- Overall monitoring and follow up of sales and marketing.
- Contact with financial and legal partners – bank, investors and IP lawyers
- Business development and establishment of new spin-off companies.
- Development of the organization to ensure successful growth of the company in the coming year.

Qualifications:

You will have strong leadership skills and commercial awareness which you can demonstrate through relevant education and experience. We know that smart textiles is a niche market and we do not expect prior knowledge of the industry.

Our offer

We offer an exciting, internationally orientated and challenging position in the fast growing smart textile and wearable technology industry. For the right candidate the salary package could include future ownership possibilities. You will have the satisfaction of knowing that your work on a daily basis will have an impact on future astronauts, athletes and patients who benefit from smart textile developments.

Contact:

For further information about the position contact Christian Dalsgaard mobile +45 40 96 69 51. We look forward to receiving applications by 12 May 2014 by email: info@ohmatex.dk marked "CEO".
